

HANDY RELEASE 0.6.2b

3 January 1989

CONFIDENTIAL and PROPRIETARY

This document describes the V 0.6.2b bug-fix release of the Handy development environment. It includes these sections:

- 6502: Changes
- Not Kidding About Recording

WARNING TO ALL: when setting up your video display frame rate, use only the SETDISP_60 macro. There's some idiosyncratic behavior in the display hardware if you ask for slower frame rates.

6502: CHANGES

Two bug fixes: all code in control.src now is wrapped within #IFDEF HANDYIO; tapedeck.mac has a better description of the animation table entries.

Not Kidding About Recording

I'm not kidding about the importance of your video recording. Tonight we lost Suzy hardware for a long time ... it's still not up, and it's been hours now. Please don't leave Bavi and Uncle Daddy strung out there with their yarbles flapping in the breeze. Get some good footage of your game.
